

T16-T20 ELECTRIC TRANSPORTING

Brand: Linde

Call for Price: 08 89473490

Short Description

1.6 - 2.0tonnes capacity

Electric Motor

Ideal for Transporting

Description

The proportional speed control varies truck speed automatically in relation to tiller angle for safe, comfortable and productive operation and a Creep speed button ensures high manoeuvrability in confined areas when operating at low speeds with the tiller in the upright position. End-of-stroke resistance on the tiller avoids accidental, abrupt braking and soft tiller fold-back slows down the tiller when returning into upright position, avoiding tiller snapping on the motor cover. This model is a compact, rounded shape with a strong, robust steel construction with a low chassis skirt to protect operator's feet. With sturdy fork tips: each can support a load of 2,000 kg without bending and large castor wheels with shock absorbers for stability on ramps and uneven floors.
